

Infection prevention and control

Committed to you, your team and your practice

VENUE @ your practice

INCLUDES handouts and certificates of attendance
4 clinical CPD hours

FORMAT 4 hours education, or
1 hour observation plus 3 hours education

Are you looking to expand your current infection prevention and control knowledge or gain insight into how you can minimise its impact of on your efficiency, cost and the environment?

Consider the benefits of doing this in your practice:

- Be guided through IPC concepts using your equipment and instruments in demonstrations
- Participate in safe open discussions
- Learn practical tips to reduce risk, increase efficiency and reduce cost associated with consumable use, loss and damage to equipment
- Eliminate travel down time
- Conclude with everyone having heard the same message.

Experience a truly practical session with our qualified and skilled consultant. It doesn't become more personalised than this and we ensure complete confidentiality in our undertakings with you.

You will learn about:

- the regulatory requirements, guidance documents and standards
- standard and transmission-based precautions:
 - * PPE, hand hygiene, sharps, waste and environmental management
 - * aseptic technique – general
 - * waterline testing and management
 - * maintaining preparedness
- working safely and efficiently – staff health and occupational exposure management
- reprocessing instruments and equipment, including:
 - * cleaning methods – the role of detergents, ultrasonic cleaners and washer disinfectors
 - * the importance of rinsing
 - * tracking and the most efficient implementation in your practice
 - * sterilisation – releasing loads, documentation and recalls
 - * validation – clarify your role and the technician's role.
- Sustainable methods of documenting the performance of tasks, test and maintenance.
